**Identity Manager Plus**

A secure cloud-based, **single sign-on solution** (SSO) for enterprises

Overview

Identity Manager Plus provides users one-click access to all their applications, allows admins to centrally manage access to applications, and helps the IT team gain visibility into application usage and user accesses. With Identity Manager Plus, enterprises can embrace cloud applications without worrying about employee password fatigue or decentralized management of application access.
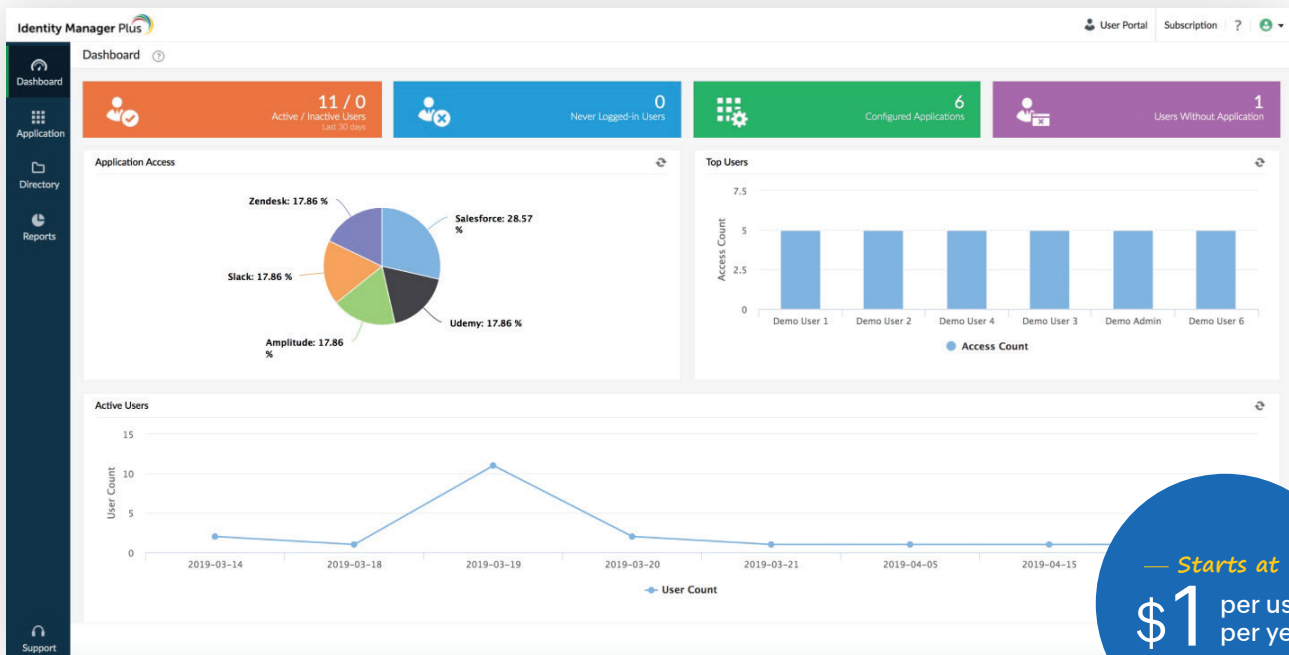

— Starts at —
$1 per user, per year

Features

- **SSO for enterprise applications:**
  Provide users secure, one-click access to enterprise applications. Users only have to log in once to access all their cloud and on-premises applications from the application dashboard.

- **Support for SAML, OAuth, and ODIC:**
  Simplify access and gain greater control over access to enterprise and custom applications that support the SAML, OAuth, and ODIC protocols by enabling SSO.

- **Automated user provisioning:**
  Assign users to configured enterprise applications and automatically create or delete user accounts for them through the System for Cross-domain Identity Management.

- **Universal directory:**
  Use the built-in directory to store user information, onboard temporary employees and contractors, and give them secure access to applications.

- **Built-in reports for deep insights:**
  Gain valuable insight into application usage and user accesses. Audit admin activities to keep an eye on changes made to applications and users.

- **Centralized access management:**
  Enable SSO for applications, add users, and manage who can access which applications from a central console.

- **Leverage existing identities:**
  Authenticate users through their existing identities in Azure Active Directory, Google Workspace Directory, or even their personal email or social media identity.

- **Fully cloud powered:**
  Identity Manager Plus is entirely cloud based, which means you don't have to worry about infrastructure costs or maintenance. Choose your subscription plan based on current requirements, and then scale as you grow.

Benefits

- Helps fast-track cloud application adoption.

- Improves the user experience by eliminating the need to remember multiple passwords.

- Reduces costly password-related help desk calls.

- Enhances productivity by providing users one-click access to all their applications so they don't have to log in multiple times to access each application.

- Helps admins manage and control access to applications from a centralized console.

- Provides valuable insights into application usage and user accesses.

System requirements

Supported directories:
- Azure Active Directory
- Google Workspace Directory
