RAPID7 | **CHECKMARX**

INTEGRATION BRIEF

Unparalleled Application Testing Through Best-of-Breed DAST and SAST

With Checkmarx CxSAST and Rapid7 AppSpider

Rapid7 and Checkmarx have partnered to deliver an unparalleled hybrid of Static and Dynamic testing solutions, helping you fully protect your applications from the earliest stages of development right through to production. AppSpider is the only dynamic application security (DAST) solution capable of effectively testing today's complex web applications, mobile applications, and web services. By leveraging AppSpider alongside Checkmarx's CxSAST, you'll be extending your security posture across the application lifecycle; this leads to quicker remediation, lower costs, and tighter overall security. Enable every part of your team to maximize your applications' potential by ensuring the security of those applications at all times. Not to be forgotten, your team gains the confidence that comes with utilizing two best-of-breed application security testing solutions.
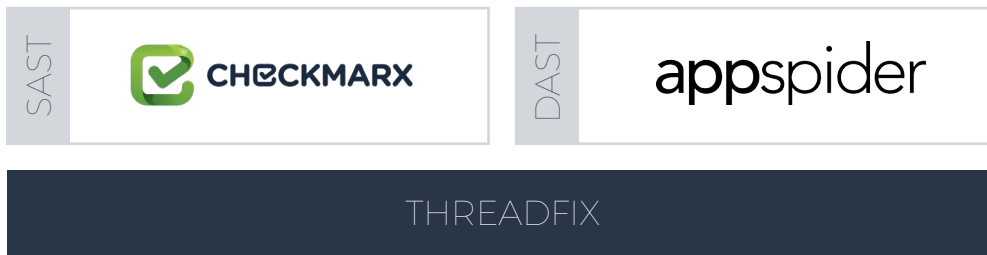

HOW IT WORKS

Get a comprehensive analysis of your codebase with a robust, interactive application security testing solution. Through an innovative combination of automated Static and Dynamic security testing, you gain maximum coverage and efficiency. With our tightly integrated and complementary solutions, you benefit from increased security throughout the Software Development Life Cycle (SDLC) and during runtime.
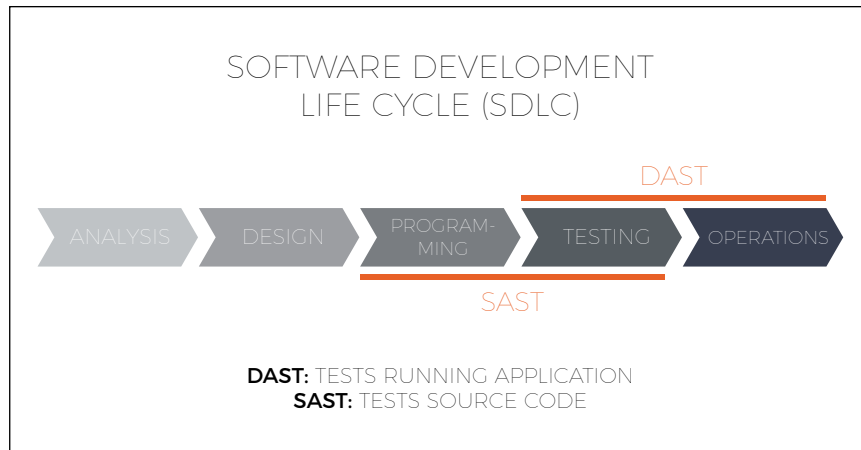

Highly accurate, consistent results pair with actionable insights via a combined, user-friendly dashboard for both platforms. With a dashboard tool such as ThreadFix by Denim Group, you'll see one unified view of your application's security state. Automating the merge of scan results increases productivity and visibility, and improves communication between your teams. Results for both platforms are also stored in your repository for later analysis.

INTEGRATION BENEFITS

- Actionable insights via a combined, user-friendly dashboard for both platforms

- Increased security throughout the Software Development Life Cycle (SDLC) and during runtime

- Comprehensive analysis of your codebase to identify vulnerabilities earlier

- Highly accurate (with fewer false positives) dynamic security testing results of your complete, running applications

- Elimination of gaping security risks

SAST	DAST

About Checkmarx

Checkmarx is an Application Security software company, whose mission is to help development organizations deliver secure applications faster. Amongst the company's 1,000 customers are 5 of the world's top 10 software vendors, 8 of the top American financial institutions, and many Fortune 500 and government organizations, including SAP, Samsung, and Salesforce.com.

For more information about Checkmarx, visit www.checkmarx.com or follow us on twitter: @Checkmarx.

About Rapid7

Rapid7 is a leading provider of security data and analytics solutions that enable organizations to implement an active, analytics-driven approach to cybersecurity. We combine our extensive experience in security data and analytics and deep insight into attacker behaviors and techniques to make sense of the wealth of data available to organizations about their IT environments and users. Our solutions empower organizations to prevent attacks by providing visibility into vulnerabilities and to rapidly detect compromises, respond to breaches, and correct the underlying causes of attacks.
