

# Rapid7 InsightOne

Accelerate Your Vulnerability Management, Application Security, and Incident Detection & Response

Rapid7 InsightOne addresses key security challenges by providing a set of best-in-class, complementary solutions, covering detection and response, vulnerability management, application security, and security automation, that when used together provide key elements of a security operations platform. The Rapid7 Insight Platform delivers the cohesive experience within InsightOne, giving security teams rich contextual analytics, streamlined workflows, and integrated controls to accelerate remediation.

**The bottom line is that when Auden's business is 10 times bigger, the security team won't need to be 10 times bigger. The Insight Platform provides us with a lot of operating leverage and scalability."**

**Philip Wright**  
Head of InfoSec, Auden Group

The process of detecting, investigating, and responding to threats and vulnerabilities requires the work and coordination of multiple people, repeatable processes and great technology. The reality is that every organization's security program is unique, and evolves at its own pace. However, most security teams are challenged by security control silos and the associated lack of visibility and the extra expense and complexity required to integrate products from different vendors. Organizations need security operations systems that help them more holistically respond to incidents and reduce vulnerabilities, not a series of separately managed and licensed point products that need to be integrated, learned, and operated.

## Rapid7 InsightOne Products & Services

With InsightOne, you'll receive four of our powerful security solutions within one, easy to manage platform.

### InsightIDR Advanced

Rapid7's leading cloud SIEM and Extended Detection and Response (XDR), InsightIDR, delivers accelerated detection and response across modern environments. Leveraging a highly curated library of expertly vetted User and Attacker Behavior detections, InsightIDR reduces noise and false positives, and helps teams zero in on real threats faster. Highly correlated investigation timelines and guided automations ensure that teams can respond quickly and confidently to any threat.

- Unifies diverse telemetry with cloud scale, correlation, and attribution
- Unlocks complete environment visibility across endpoint, network, user, cloud, and more
- Detects stealthy attacks early in the ATT&CK chain
- Delivers detailed events and investigations so analysts have all relevant information
- Accelerates response with one-click automation

### InsightVM

InsightVM provides a scalable and efficient cloud-based system to collect vulnerability data, turn it into actionable information, and ultimately minimize risk. InsightVM leverages the latest analytics and endpoint technology to discover vulnerabilities in near real-time, pinpoint their location, prioritize them for your organization, facilitate collaboration with other teams, and confirm that your exposure has been addressed.

- Provides continuous endpoint monitoring
- Visualize, prioritize, assign and fix vulnerabilities
- Scan and assess cloud, virtual, container-based, and networking systems.
- Prioritize risk based on factors including, CVSS scores, malware and exploit exposure, and vulnerability age.
- Assign and track remediation duties and leverage IT ticketing solutions

### InsightAppSec

InsightAppSec is Rapid7's Dynamic Application Security Testing (DAST) solution. It is built for security and DevOps teams looking to add security across the SDLC. Understand your application attack surface and simulate attacks to understand the risk web applications and APIs are to your business. Our unique universal translator, built-in integrations, and attack replay capabilities provide you with accurate & comprehensive scan coverage and fast time-to-value—without hindering speed of development.

- Industry leading accuracy and coverage
- Find vulnerabilities in your web application and APIs
- Provide actionable remediation guidance
- Visualize your application risk with custom dashboards
- Integrate with DevOps workflows to prevent new risks

### InsightConnect Pro Automation

InsightConnect is Rapid7's security orchestration, automation and response (SOAR) solution — allowing security teams to accelerate time-intensive, highly manual incident response and vulnerability management processes. With more than 300 plugins to connect the organization's IT and security systems — and a library of customizable workflows — the security team will be more available to tackle bigger challenges.

- Automate incident response
- Integrate the organization's IT and security systems
- Accelerate vulnerability management
- Ease collaboration across the organization
- Simplify human decision making

### Insight Platform

In addition to the strong value of the individual products in InsightOne, the combined solution enabled by the Insight Platform delivers on a number of more far reaching use cases, including:

- Vulnerability Management Automation
- Incident Response Automation
- Combined Vulnerability Reporting
- Vulnerability and asset context in an incident investigation
- Asset and user activity in support of vulnerability patching prioritization

### Shared platform services

- Lightweight single endpoint agent for incident response and vulnerability scanning
- Cloud-based global deployment for administration and system management
- Security automation and customization
- Comprehensive API and 3rd-party integrations

### Deployment Services

Rapid7's deployment services are tailored to quickly and expertly operationalize a Rapid7 InsightOne implementation. By focusing on needed outcomes and aligning to product integrations, configurations, process automations, and reporting workflows, Rapid7 experts work directly with your team to quickly deploy and enable the InsightOne products.

\*Licensing of InsightOne is by number of assets and requires a minimum of 500 assets and provides for unlimited automation workflows and 50 applications
