FEARLESS RANSOMWARE PROTECTION

Confidently replace traditional AV

Traditional malware prevention is simply not effective against modern, multi-stage ransomware. The current generation of sophisticated ransomware threats have evolved to better evade standard perimeter defenses in order to infiltrate and compromise systems, and even purported next-gen solutions are often insufficient.

Cybereason enables the **Defenders** with uncompromising, multi-layered ransomware protection. We empower you to quickly detect the preliminary stages of a ransomware attack, confidently analyze indicators or behavior, and proactively prevent the execution of the malicious payload.

The limitations of traditional AV defenses

Traditional AV defenses lack visibility for many common attack vectors and are often ineffective against the latest generation of ransomware attacks. Modern defenders require complete protection that provides confidence against today's threats.

Check out how Traditional AV stacks up to Cybereason:

Let me see it in action

	cybereason	Traditional AV Potential solutions include McAfee, Kaspersky, and otheres
Signature based prevention	✓	✓
Fileless prevention	✓	—
Behavior-based randsomware prevention	✓	—
Block malicious PowerShell scripts	✓	—
Malicious document protection	✓	—
Visibility into pack and re-tooled ransomware	✓	—
Full data collection of all telemetry from the endpoint so even the stealthiest attackers are caught	✓	—
Breach warranty that includes ransomware protection	✓	—
Embedded deception to identify ransomware behaviors	✓	—
Cutting-edge malware research (include hyperlink to Nocturnus)	✓	—
Comprehensive attack correlation, providing complete visibility in a single view	✓	—

Cybereason against ransomware:

Block

- Ransomware execution
- Data encryption
- Unauthorized PowerShell commands

Monitor

- Initial access
- Privilege escalation
- Lateral movement

Respond & Recover

- Malicious process remediation
- Guided response
- Recovery of all impacted systems

Benefits:

- Proven protection - validated as the best tech against ransomware in third party testing
- Deep visibility into endpoints, users and systems across the enterprise, both on-prem and in the cloud
- Understand the full attack story (Malop)
- Stop active cyber attacks before malicious execution
- Focused incident response with low false-positive rates
- Increased analyst productivity - Enables a single analyst to protect 200,000 endpoints

The. Best. Tech.
in the fight against ransomware
backed by a $1,000,000 breach protection warranty

Standing behind our technology, people, and security operation processes, we are committed to developing a future-proofed technology that can outthink, outpace, and end attacks. We are backing that commitment with a breach protection warranty of up to $1 million in the event that a customer experiences a data breach within a Cybereason protected environment.
