DDI Central

A powerful network management solution unifying DNS, DHCP, and IPAM, enabling businesses to:

- ✓ **Streamline network operations** with centralized and automated IP address management.
- ✓ **Enhance security** with advanced security features.
- ✓ **Scale effortlessly** with complete visibility and control over local and remote network sites.

Deploy DDI Central as an overlay on your existing infrastructure to discover, visualize, configure, and seamlessly auto-provision DNS, DHCP, and IP resources from a unified interface.

Features

DNS Features

Bulk DNS zone editor tool | Dual-stack full forward and reverse DNS zone management | Dynamic DNS | DNS scavenging | Zone scopes | Query resolution policies | Third party DNS provider integrations

DHCP Features

DHCP scope controller | DHCPv6 support | DHCP fingerprinting policies | Static Subnet and lease management | PXE boot templates | DHCP reservations | DHCP failover

DNS Security Features

DNSSEC with TSIG | DNS Firewall | Response rate limiting policies

IPAM Features

Dual stack IP inventory management | IP lease history insights | IP-MAC identity mapping

Login authentication

SAML authentication | LDAP authentication | Two-factor authentication

Why choose DDI Central for your network infrastructure?

- ✓ Pared back navigation with a straightforward UI
- ✓ Large scale remote site visibility and control
- ✓ Centralized DNS, DHCP, and IP address management
- ✓ Advanced DNS, DHCP, and IP discovery
- ✓ Policy based IPv4 and IPv6 assignments
- ✓ Advanced scope monitoring
- ✓ Built-in failover and auditing
- ✓ Role-based access control
- ✓ Comprehensive reports and analytics
