

Simplify identity management and boost security with Identity360

Overview

ManageEngine Identity360 is a cloud-native identity platform that helps enterprises address workforce IAM challenges. Its powerful capabilities include a built-in Universal Directory, identity orchestration, SSO, Adaptive MFA for enterprise apps, devices and other endpoints, step-up authentication, role-based access control, detailed reports, and more. It empowers admins to manage identities across directories and their access to enterprise apps from a secure, centralized console. With Identity360, not only can enterprises scale their businesses effortlessly, but they can also ensure compliance and identity-first security.

Identity360 highlights

 Capabilities	 Benefits	 Insights
Evaluate <i>(What we have)</i>	Perform <i>(What you can do)</i>	Control <i>(What you can monitor)</i>
Universal Directory Cloud-native identity store to consolidate identities from different platforms	• Manage users across all integrated apps from a single console • Simplify access management to identities and devices • Eliminate identity silos • Accelerate your move to the cloud	Newly added users, devices and real-time user activity reports with login details
User life cycle management Orchestration capability for your organization's intricate workflows	• Automate the entire life cycle from onboarding to offboarding • Use smart templates to auto-populate attribute values during provisioning • Sync changes to multiple directories and applications	All users report with the ability to perform management actions
Adaptive MFA Customizable MFA controls across multiple platforms	• Secure access to enterprise apps and endpoint logons with context-aware, adaptive MFA • Extend MFA to RDP, Wi-Fi, VPN, and RADIUS-supporting endpoints, and to privilege sessions including UAC, sudo, and SSH logins • Leverage multiple MFA authenticators, including FIDO2 passkeys, smartcards, Duo and TOTP authenticators • Leverage offline MFA to authenticate users and machines with limited or no network connectivity	MFA audit reports showing user enrollment, MFA login attempts, and protected devices
Single sign-on and passwordless login Reduce login fatigue and simplify application access	• Give users one-click access to enterprise applications via SSO • Integrate with applications that support SAML, OAuth, and OIDC protocols, including custom apps • Skip the inconvenience of remembering complex passwords to log into enterprise apps by leveraging passwordless login	SSO reports with logon count, last logon time, and assigned users for all applications
Delegation The ability to off-load common IT tasks onto technicians	• Delegate routine management tasks to non-admin users with zero privilege escalation • Manage (enable or disable) custom technician roles and predefined roles, such as the Admin and Operator	A technician report showing users who have not logged in over a specified period of time

Benefits

Enhanced security

Restrict access to authorized users and minimize the risk of data breaches.

Increased scalability

Cloud-native Identity360 adapts to your evolving needs, keeping your growing organization secure.

Improved visibility

Ensure regulatory compliance by closely monitoring user actions and providing detailed reports.

Cost savings

Automate tasks, cut labor and maintenance costs with cloud architecture, for long-term savings.
